

CUBILITY SECURES CHINESE CONTRACT FOR 24 MUDCUBES

Contract Sees Over 200 Sales of the MudCube Worldwide

Sandnes (Norway), June 2, 2021 – Cubility AS (“Cubility”), a leading provider of solids control solutions, has secured a contract for the delivery of 24 MudCube solid control systems to Baoji Oilfield Machinery Co., Ltd. (BOMCO) in China. BOMCO is a leading research & development manufacturing enterprise fully owned by China National Petroleum Corporation (CNPC).

Delivery will take place during the second quarter of 2021 and marks the second largest delivery of MudCubes to BOMCO, following an earlier shipment of 10 MudCubes in 2020. The units provided from Cubility will be deployed for onshore operation with Sinopec and CNPC, two of China’s largest oilfield operators.

“Across the world, Cubility customers are seeing improved and more sustainable workforce and business practices in solids control through significant cost savings and a minimizing of exposure to waste and negative environmental impacts. We are delighted that BOMCO will be enjoying these benefits.” said **Kai Preben Sæveland, CEO of Cubility**.

His words were backed up by **VP of Sales at Cubility, Arne Thomas Haaland**: *“That we are seeing continued interest from Chinese companies is testament to the MudCubes’ strong performance, reliability, and growing market relevance as we now go over 200 MudCube sales across the globe. This international growth will underpin our ability to innovate further into new service areas and applications.”*

Launched by Cubility in 2012, the MudCube is the first fully enclosed, lightweight solid control system for all types of drilling fluids. It replaces the traditional shale shaker, but only uses one tenth of the G-forces and avoids generating fines in the filtration process. The MudCube primary solids control technology is using light vibration with high air flow through a rotating filterbelt to separate all types of drilling fluids from drilled solids.

Originally focused on the offshore oil & gas industry, the MudCube is now predominantly installed in onshore drilling operations. The solution is also gaining traction in applications outside the oil and gas industry, such as dewatering and waste management.

About Cubility

Cubility, established in 2005, is a company providing the MudCube – a competitive product for filtration, solids control and waste treatment for various applications. Cubility has delivered commercial MudCubes since 2012.

Cublity reduces carbon footprint and costs while optimizing solids control. With optimized separation, the company's clients maximize recycling and reduce waste levels while securing a safe working environment

Cublity is based in Sandnes, Norway, and has sales office in Russia, as well as distribution partners across all the major oil & gas producing regions. It is owned by the private equity firm Triton Partners.
